SHEET: 1 OF 1

Call: Placed _____, Received X , Returned _____

PROJECT: Planter's Warehouse	COUNTY: Columbus
CONVERSATION WITH: Kyle Cox	TELEPHONE: 910-653-4357
AFFILIATION: Cox Furniture, RP	
DISCUSSION:	
<p>Kyle said that he spoke with Nicole at GRI and she said that the nitrate levels were down but they had to do something about the ammonia. He didn't really understand and just wants this matter resolved. He said that he is having to pay \$7,000 every time he turns around. I told him that ammonia was considered a hazardous substance. I was aware that the area was agricultural so I told GRI that they could take background samples. I said that if I was remembering right, the onsite samples were several orders of magnitude above the background samples, which means that the groundwater had been impacted by onsite activities. They would need to get ammonia levels down to the background levels. He asked if I could guide GRI on what they needed to do. I told him that I had not received any info about the site in quite some time. He said that they had done a number of AFVR events and were sampling quarterly. I said that off the cuff, I would say that they would need to get the onsite ammonia levels down to background levels then have four quarters with the levels remaining at background levels before we could close the site. He said that they only needed two more quarters then. I reiterated that I didn't know whether that was the case since I hadn't seen the data. He said okay.</p>
